

1.What goal will your website be designed to achieve?

Anime discovery platform with a community. To browse anime listings, trending anime, and discover new anime. Users can comment on their favorite anime episodes, keep a list of their favorite anime, keep a list of current animes that they are watching, and so on.

2.What kind of users will visit your site? In other words, what is the demographic of your users?

Users who like anime.

3.What data do you plan on using? You may have not picked your actual API yet,which is fine, just outline what kind of data you would like it to contain.

Kitsu API will provide the data on lists of anime and trending anime.

4.In brief, outline your approach to creating your project (knowing that you may not know everything in advance and that these details might change later). Answer questions like the ones below, but feel free to add more information:

a.What does your database schema look like?

Users, animes, messages (user comments on an anime episode)

b.What kinds of issues might you run into with your API?

Difficulty of API usage. Are some other features that I do not know about yet behind a paywall?

c.Is there any sensitive information you need to secure?

User password, keeping the API client secured.

d.What functionality will your app include?

Search for a specific anime by genre or title. Add an anime to your favorite anime list. Comment on anime episodes. See trending animes, what anime is popular and recommended to watch. Users can register an account and login.

e.What will the user flow look like?

- 1) Users login/register into the site.
- 2) See trending animes / search for specific / add an anime to their favorite list or current watch list / comments on specific anime or anime episodes.

f.What features make your site more than CRUD? Do you have any stretchgoals?

Authentication and Authorization, search features, and play trending anime trailers on homepage with sound toggles.
